README.md

Router Exploitation Toolkit - REXT

Small toolkit for easy creation and usage of various python scripts that work with embedded devices.

- core - contains most of toolkits basic functions
- databases - contains databases, like default credentials etc.
- interface - contains code that is being used for the creation and manipulation with interface
- modules - contains structure of modules, that can be loaded, every module contains vendor specific sub-modules where scripts are stored.
 - decryptors
 - exploits
 - harvesters
 - misc
 - scanners
- output - output goes here

This is still heavy work-in progress

TODO

- Porting javascript exploits from routerpwn.com (not always in the most pythonic way) - feel free to contribute
- Wiki
- Tests
