Threat Intelligence ([//intel.deepviz.com/](https://intel.deepviz.com/))

Simplify incident response and enrich your threat telemetry

Staying on top of the large influx of malware out there isn't easy, with hundreds of thousands of objects newly created each day it is hard to make sense of it all. Deepviz allows you to analyze, correlate and understand the key questions relating to malware samples: Who, Where, What?

Who

Gain a quick understanding of the malware campaign including what other already classified indicators it relates to. With this information you can build gain rapid situational awareness of the campaign to understand if this is something that is well known or truly unique to your environment.

Where

Understanding the communication infrastructure used by malware is important, both in forensics as well as in defense. Having the ability to understand what a sample does, which hosts it communicates to and what protocols are used allows you to quickly mitigate the effects of current infections using

What

Using our powerful analysis system which we wrote specifically for malware analysis allows us to gain a deep understanding of the behaviors object exhibit in our analysis environment. This is all correlated in our analytics to give you a full picture of what a specific object does, and how it interacts with all

your mitigation infrastructure.

other samples.

Deepviz Malware Analyzer ([//intel.deepviz.com/](http://intel.deepviz.com/))

Forensics and behavior monitoring

Our cloud based sandbox has been written from scratch in order to provide a scalable platform for large scale malware analysis.

Powerfull API

Our REST API allows you to programmatically interface with our sandbox to submit samples as well as retrieve analysis reports from the system. Reports are available in easily parseable JSON format.

Deep Visibility

We wrote our sandbox infrastructure from scratch in order to get the best information out of our malware analysis. Our system has been architected to answer the demands of large scale malware processing.

Scalability

Our system can scale out horizontally to perform runtime analysis of millions of samples per day. We architected the solution to operate in the cloud and leverage the auto scaling technology to handle peak workloads. Contact us if you have a large sample set or feed you would like to process.
