Black Hat Arsenal peepdf challenge

Analysis Arsenal Black Hat Challenge CTF PDF peepdf Tools

In one week I will be traveling to Las Vegas to show how **peepdf** works in the **Black Hat USA Arsenal**. My time slot will be on **Wednesday the 5th from 15:30 to 18:00**, so you are more than welcome to come by and say hi, ask questions or just talk to me. I will also be presenting some of the work **Rohit Dua** is doing during the **Google Summer of Code (GSoC)**, adding a **scoring system** for **peepdf**.

I wanted to prepare a challenge before my presentation in the **Arsenal**, so I have been working on that these past days. It is ready now, so I am releasing it today. **Download the PDF file and play with it!** [There is no malicious content inside](#) so you can (and you must) open the document with no fear. It is more the classical challenge that you can find in a CTF. I would recommend using versions of Adobe Reader prior to XI to see what you have to see ;) The challenge will finish after my Black Hat presentation and I will publish the winners and the solutions (if they allow me) the days after it. This is how the PDF file looks like:

The idea behind the challenge is using **peepdf** for all the analysis if it is possible ([grabbing the process memory is not allowed!](#) ;)). You can send your solutions to *peepdf at eternal-todo dot com*. I don't need a really nice report but I would like to see the steps you followed to solve the challenge, the tools you used (less tools is better!), etc. You can also come to the **Arsenal** and tell me your solution ;)

I don't have any sponsor (be free to offer you as sponsor!) or impressive prizes so I will send a **peepdf** t-shirt to the three best and fastest reports/solutions. If you are one of the winners and you are at **Black Hat** I could even bring something nice for you from the tulip country. But challenges are not about the prizes but about the challenge itself, right? ;) Please, spread the word and I hope you enjoy it!!
