ICS security is an amalgamation of two major segments which includes network security technologies and professional services. Together these segments provide overall security solutions to the national critical infrastructures such as power, energy, transportation and water utilities, pipelines and communication systems. Increasing sophisticated cyber-attacks and threats on control networks have made it compulsory for the power and energy production companies to implement highly sophisticated security solutions. Most of the countries have framed strict regulations and security compliances for the securing the industrial control networks. ICS security provides network security solutions as well as professional services are necessary to secure the power plants from vulnerabilities. This helps in performing operations at the plant without any disturbances and hindrances.

Even though there are security measures being implemented to protect the control systems and automation solutions, but there is no single comprehensive solution for providing network security to these networks. The control system solutions that are currently implemented are obsolete and are not prepared to counter the target specific cyber-attacks. Major Tier1 companies are now providing embedded control system solutions along with security solutions and are getting into this escalating market for ICS security.

MarketsandMarkets has segmented the global ICS security by type of security technology: Distributed Denial of Service (DDoS), Intrusion Detection Systems/Intrusion Prevention Systems (IDS/IPS), firewall, antivirus/malware, virtualization security, Data Loss Prevention (DLP), Security Information and Event Management (SIEM), application whitelisting, Unified Threat Management (UTM), update and patch management and database activity monitoring of verticals: power, energy and utilities, transportation systems, chemical and manufacturing and other critical infrastructures; by regions: North America (NA), Asia Pacific (APAC), Europe (EU), Middle East and Africa (MEA) and Latin America (LA).

The major forces driving this market are the increased threat of cyber-attacks across the

and power sector, government pressure and security compliance and regulations, the terrorist attacks and cyber-attacks, lack in comprehensive solutions for ICS security are threats. Companies providing cyber security solutions are looking forward to gain a competitive advantage in this growing market, thereby creating comprehensive security solutions and integrated security management platforms for the industries and critical infrastructures.

The **Industrial Control System (ICS) Security Market** is expected to grow from \$7.82 billion in 2014 to \$11.29 billion by 2019, at a Compound Annual Growth Rate (CAGR) of 7.6% due to increasing security and utilities vertical and adoption, for ICS security solutions. This is followed by commercial, communication systems and manufacturing industry ICS security solutions. In terms of regions, North America is expected to be the largest market on the basis of spending and adoption for ICS security solutions. MarketsandMarkets further expects that the increasing energy markets in the developing economies and increasing deployment of ICS infrastructure will further enhance the growth of the market.

About MarketsandMarkets

MarketsandMarkets is world's No. 2 firm in terms of annually published premium market research reports. Serving 1700 global fortune enterprises with more than 1200 premium studies in a year, M&M is catering to multitude of clients across 8 different industrial verticals. We specialize in consulting assignments and business research across high growth markets, cutting edge technologies and newer applications.
