iOS 9.1 Jailbreak
For All iPhones, iPads & iPod touches

iOS 9.2 Jailbreak
For All iPhones, iPads & iPod touches

TaiG for iOS 9.1 & iOS 9.2 Jailbreak

TaiG 9, the latest pre Jailbreaking tool for iOS 9.1/9.2 has been released now. We need our valuable users to perform and test our pre jailbreak tool in order to release our full functional jailbreak tool. You can be a part of our testing team now. If you are willing to be a part of taig9 test team please visit taig9.comissues@taig9.com.

Step by Step Guide

Unlike our previous jailbreak tools , this is only an alpha version of jailbreak for developer testing and for bug fixes. Below is the step by step guide for the jailbreak.

1	Visit taig9.com from SAFARI browser of your iDevice
2	Please hang a bit while your device connects to taig servers and create a point to point connection between your device and taig server.
3	After a successful server connection, It will display a message saying 'Server connectivity successful'. You need to continue in this step
4	The process will prepare your device for jailbreak by identifying your device and iOS version. After detecting your system data, it will ask you to continue.
5	In the next step the process will download required files and configurations for taig jailbreak. This will take a few minutes and the time depends on your internet connectivity. Somethimes this will take a few minutes. After downloading the required files it will again ask you to tap on the continue button.
6	Now you are in the final and most important step of this process. In this step the taig process will jailbreak your device and prepare it for Cydia installation. This will take 2-3 minutes to complete. Please note that this process needs continuous internet connectivity and need to hang a bit in this window. After a successful jailbreak it will display you a jailbreak successful message. You just need to go ahead and install Cydia. If you face any errors, the process will rollback and you can start form the beginning after restarting your device.
7	The Last step will automatically redirect you to cydia installation and if it is not redirected automatically, just tap on install cydia manually button to install cydia manually.
8	You are done with iOS 9.1 or iOS 9.2 beta pre jailbreaking and now you can enjoy Cydia and report issues and bugs to taig9 team.

TaiG for iOS 9.1 / iOS 9.2 beta Jailbreak(Post Jailbreak or Full Jailbreak)

TaiG 9, the latest full jailbreaking tool for iOS 9.1 & iOS 9.2 will be releasing soon. Currently, TaiG9 full jailbreak tool is in its final testing stages and it will be released for public within few days. It is confirmed that TaiG9 jailbreaking tool is compatible with iOS 9 and later releases. Please bare with us and keep in touch with us for more details.
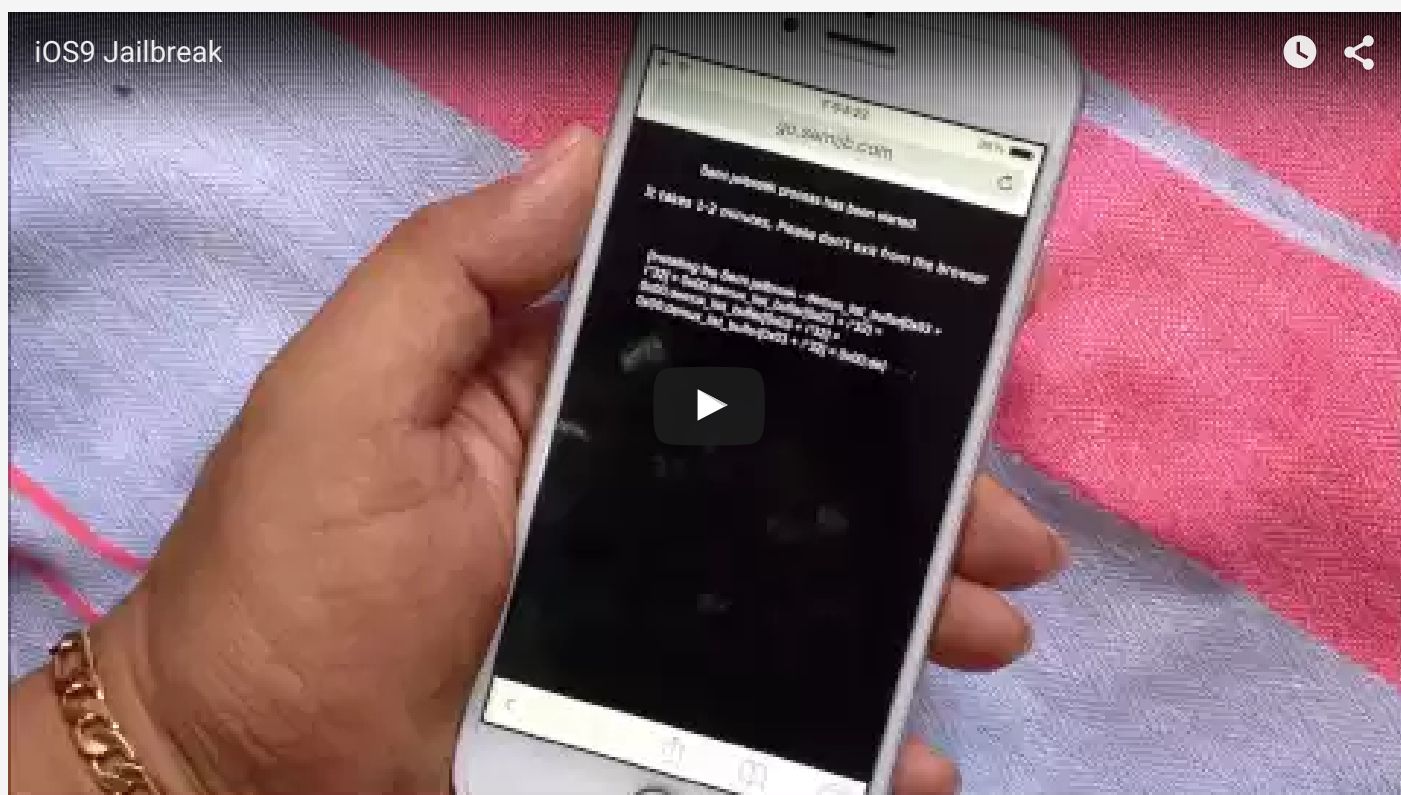

TaiG tool for iOS 8.1-8.3 has been released a couple of months back gaining the attention of thousands of iDevice users all over the world. And now we are focusing on iOS 9.2 jailbreaking with lots of security and zero harm to your device.

The latest major version of Apple, iOS 9 was so called as impenetratable. But still we are capable of creeping through the security holes and accessing iOS 9 core which we can use for jailbreaking. At this stage, we can not point out these tiny holes we found as we still have not publicly released our tool.

iOS 9.1 Jailbreak

TaiG 9 is still a beta version software. We are focusing to improve the TaiG 9 tool to Jailbreak iOS 9.2 upcoming version. You can use the TaiG 9 online script to Jailbreak iOS 9.1 and 9.2. But you cannot install the Cydia for iOS 9.1 using this Taig9 tool. We recommend upgrading your device to iOS 9.2 beta version to Jailbreak it using the TaiG 9. You should have an Apple developer account to upgrade your iOS 9.1 version to iOS 9.2 beta at this time. .

Otherwise you can use the SemiJB online script to Jailbreak your iOS 9.1 device. Just visit semijb.com from the Safari browser of your device to Jailbreak it. Semi Jailbreak is compatible with iOS 9 - 9.1. Watch following video for more information about the Semi Jailbreak

Special Note

TaiG 9 is not the first time TaiG is providing a secured jailbreaking tool. The recent tool we released was for iOS 8.4. **Now its time for jailbreaking iOS 9.1**.

The new version of TaiG (TaiG9 for iOS 9 jailbreak) will be the best of all the jailbreaking tools that have been released so far. As per the bad experience we had last time, the code and the security vulnerabilities we used are highly safe and secured. TaiG team is confident with the tool they developed and you will need to wait for a little more time for a real jailbreaking experience in iOS 9.2.

Keep in touch and hope for the best.

TaiG Jailbreak Team
